Project Description

The intent of the project was to install a new Savaria, self-enclosed, handicap lift to provide better handicap access from a lower level hall/function area to the auditorium seating area. Scope of work included cutting through 12" thick solid reinforced concrete wall for access to the auditorium, running new power to the lift and other miscellaneous finishes. Because the auditorium was in constant use during the day, all work had to be performed off hours from 10 PM until 6AM
